

Supplementary Figures.

Supplementary Figure 1. The density and number of networks for different STRING confidence thresholds. All proteins in the lowest confidence threshold (0.15) are contained within a single network (0.9=7.5k, 0.7= 3.5k, 0.4=136, 0.15=1).

Supplementary Figure 2. Distribution of BEACON numbers for simulated networks of varying size and a medium confidence score show similar means, but shrinking standard deviations as the number of proteins increased.
